

What is the bird spikes?

Introduction:

A bird control spike, also called an anti bird spike, is a device consisting of base and long spike for bird control. They can be installed on building ledges, signs, windowsills, roof perimeters, air conditioners, support structure, awnings, poles, lights, statues, beams and trusses. The bird control spikes are used to deter birds without harming. The spikes are designed to protect surface without bird or small animal landing.

Advantage:

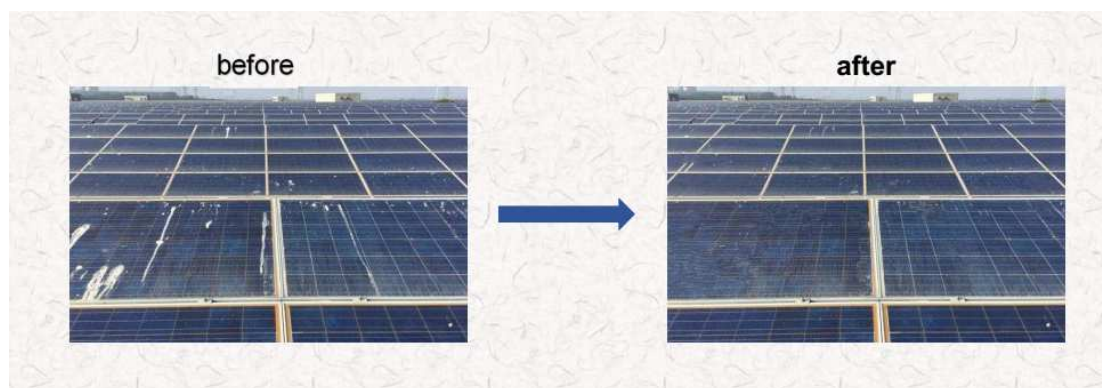

- ✧ Widely using: bird spikes can install on any surface, where need bird deterrent, such as ledges, roof peaks, beams, parapet walls, conduits, signs, flat or curved surfaces.
- ✧ Easy to install - can be glued, screwed, or tied down according to surface; no maintenance required. Will not cut or injure installer
- ✧ Covering a variety pest type. pigeons, sparrows, starlings, crows, blackbirds, grackles, seagulls, swallows and more. Bats, climbing animals and more.
- ✧ UV plastic and high quality stainless steel ensure long service time.
- ✧ Deter birds effectively but will not hurt them.

How to install bird spikes?

Installation:

Step 1

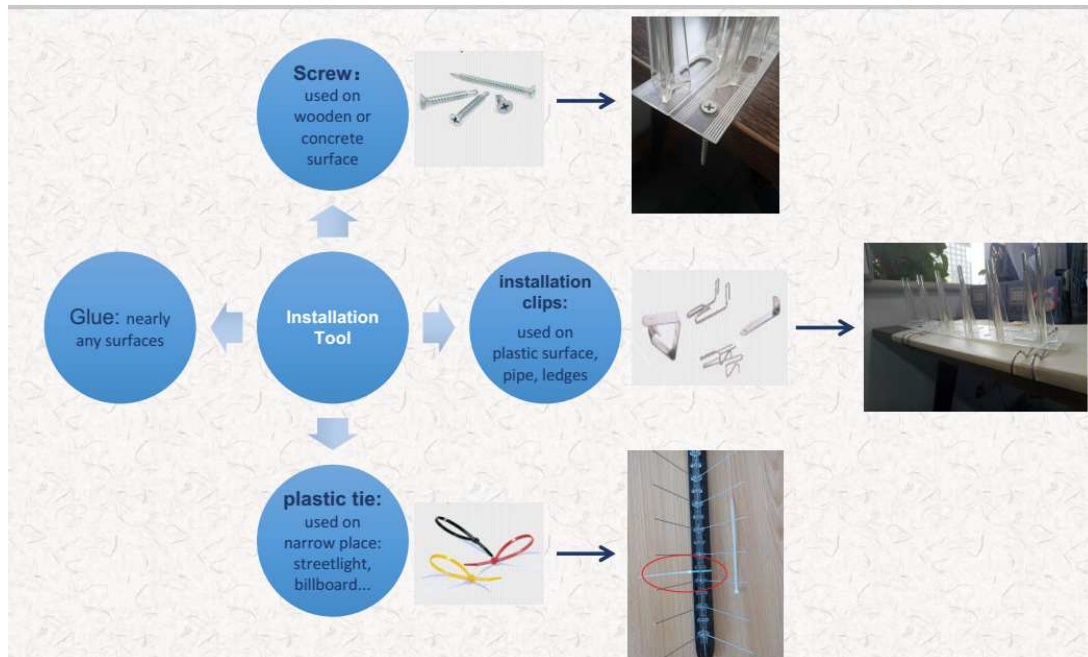

Be sure that the area is clean, dry and free from bird droppings.

Step 2

Choose the tools you plan to use according to the base condition: If using on a wooden or concrete surface, simply use the screw.

If using on a plastic surface, the spikes can be fixed in place with glue, plastic ties, or installation clamp.

Step 3

The first row of spikes are pasted on the front of the surface, so that it is fully protected by the spikes.

Step 4

Immediately replace the damaged spike before the birds move in.
